

The Power of the Portfolio

CyberGRX brings a revolutionary approach to Third-Party Cyber Risk Management (TPCRM). Using sophisticated data analytics, real-world attack scenarios, and real-time threat intelligence, we provide a complete portfolio analysis of your third-party ecosystem, helping you to prioritize your risks and make smarter decisions.

With CyberGRX you get a portfolio-wide view that lets you see, measure, and reduce the overall risk across your entire portfolio. With 360-degree correlated data and rich, diverse analytics to support real-time decision making, you have more insight into your risk surface than ever before.

MODERNIZE YOUR TPCRM APPROACH

Data Insights

Drive rapid results with dynamic third-party risk data and advanced analytics that provide a real-time and prioritized view of critical risk

Ecosystem Management

Efficiently manage an evolving third-party ecosystem with a collaborative, crowd-sourced Exchange featuring a repository of validated and predictive assessment data

Benchmarking

Identify trends and create benchmarks by leveraging structured data and actionable intelligence

Collaborate

Strengthen customer and third-party relationships through collaborative and proactive risk mitigation

CYBERGRX MEMBER BENEFITS

- Take advantage of complete portfolio visibility to see not only the inherent and predicted risk posture of each third party, but also monitor and assess your vendors through the lens that matters most to you, enabling you to make faster decisions
- Detect any control gaps typically exploited in common attacks as well as map controls to standard and custom frameworks with Framework Mapper
- Get a near-real-time view of how you and your vendor ecosystem are measured against attacks and breaches with threat intelligence and breach monitoring and alerting built into the platform
- Identify trends and create benchmarks by leveraging the structured data on the Exchange
- Select from optional additional Client Services offerings that are tailored to help you capture more value from our award-winning platform so you can confidently act on third-party cyber risks
- Respond quickly to breaches and have a clearer view of real-life risk scenarios to reduce exposure on a continuous basis with portfolio-wide monitoring
- Increase visibility with Attack Scenario Analytics that uses the MITRE® Framework to apply attack scenario modeling, inherent risk analysis against assessment results to create a prioritized control gap analysis
- Manage your evolving third-party ecosystem with an ever-growing exchange

Contact us today to learn how CyberGRX can help you protect your third-party digital ecosystem with a data-driven approach. It's time to defend yourself differently.
